## Foreword

This ANSI registered Technical Report was created as a response to the COVID-19 pandemic and the increased risk of this disease. The guidance includes practical recommendations to organizations and workers on how to manage risks related to workers and other relevant interested parties from the risks related to COVID-19.

This technical report is nationally adopted and registered with ANSI and is an identical adoption of the ISO Publicly Available Specification (PAS) 45005, titled “Occupational health and safety management– General guidelines for safe working during the COVID-19 pandemic.”

We hope this technical report will support your organization’s effort in creating a safe workspace and help you reap the benefits offered by ISO 45005.

Publication of this Technical Report that has been registered with ANSI has been approved by the Accredited Standards Developer, American Society of Safety Professionals (ASSP), 520 N. Northwest Highway, Park Ridge, Illinois 60068. This document is registered as a Technical Report according to the “Procedures for the Registration of Technical Reports” with ANSI. This document is not an American National Standard and the material contained herein is not normative in nature. Comments on the content of this document should be sent to ASSP, 520 N. Northwest Highway, Park Ridge, Illinois 60068.

This document is registered as a Technical Report in the U.S. TAG for TC283 publications according to the Procedures for the Registration of ANSI Technical Reports and the ANSI/ASSP Safety Operating Procedures.

This Technical Report was processed and approved for submittal to ANSI by U.S. TAG for TC283. Approval of the technical report does not necessarily imply (nor is it required) that all committee members voted for its approval. At the time this technical report was registered, the U.S. TAG for TC283 had the following members:

Vic Toy, CIH, CSP, Chair  
 Kathy Seabrook, CSP, CFIOSH, EurOSHM, Vice Chair  
 Tim Fisher, CSP, CHMM, CPEA, CAE, ARM, STS, TAG Administrator  
 Jennie Dalesandro, Administrative Technical Support

Organization Represented	Name of Representative

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 283, *Occupational health and safety management*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

This document is a response to the COVID-19 pandemic and the increased risk this disease presents to the health, safety and well-being of people in all settings, including those working at home or in mobile settings, and workers and other interested parties in physical workplaces.

Governments, regulators and other professional bodies across the world have published guidance on working safely during the COVID-19 pandemic. This document provides a single generic set of guidelines that complements this information and supports the principles that:

- reasonable measures to manage the risks arising from COVID-19 are, or will be, implemented to protect the health and safety of workers and other relevant interested parties;
- workers should not be required to work unless these measures have been implemented.

This guidance includes practical recommendations to organizations and workers on how to manage these risks and is suitable for organizations resuming operations, those that have been operational throughout the pandemic, and those that are starting operations.

The guidance is generic and applicable to organizations regardless of the nature of business, service provision, size or complexity. It recognizes that many smaller organizations do not have dedicated departments for functions such as occupational health and safety (OH&S), facilities management or human resources. More detailed information for specific functions is available from professional bodies and a wide range of national and international standards.

By implementing the guidance in this document, the organization will be able to:

- a) take effective action to protect workers and other relevant interested parties from the risks related to COVID-19;
- b) demonstrate that it is addressing risks related to COVID-19 using a systematic approach;
- c) put in place a framework to enable effective and timely adaptation to the changing situation.

Organizations using ISO 45001 can use this document to inform their OH&S management system by relating the relevant clauses to the Plan-Do-Check-Act (PDCA) cycle, as outlined below. Taking a systems approach facilitates the coordination of resources and efforts that is so important in managing COVID-19.

- Plan: Plan what needs to be done for the organization to work safely (see [Clauses 4 to 8](#)).
- Do: Do what the organization has planned to do (see [Clauses 9 to 12](#)).
- Check: See how well it is working (see [Clause 13](#)).
- Act: Fix problems and look for ways to make what the organization is doing even more effective (see [Clause 14](#)).

This document is not intended to be a single step-by-step set of recommendations. It provides a framework in which the PDCA cycle outlined above should be repeated, with all parts active at all times, to enable ongoing continual improvement and to ensure the organization responds to changes during the different phases of the pandemic.

# Occupational health and safety management — General guidelines for safe working during the COVID-19 pandemic

## 1 Scope

This document gives guidelines for organizations on how to manage the risks arising from COVID-19 to protect work-related health, safety and well-being.

This document is applicable to organizations of all sizes and sectors, including those that:

- a) have been operating throughout the pandemic;
- b) are resuming or planning to resume operations following full or partial closure;
- c) are re-occupying workplaces that have been fully or partially closed;
- d) are new and planning to operate for the first time.

This document also provides guidance relating to the protection of workers of all types (e.g. workers employed by the organization, workers of external providers, contractors, self-employed individuals, agency workers, older workers, workers with a disability and first responders), and other relevant interested parties (e.g. visitors to a workplace, including members of the public).

This document is not intended to provide guidance on how to implement specific infection control protocols in clinical, healthcare and other settings.

**NOTE** Applicable legislation and guidance is provided by government, regulators and health authorities for workers in these settings or in related roles.

## 2 Normative references

There are no normative references in this document.

## 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

### 3.1

#### **organization**

person or group of people that has its own functions with responsibilities, authorities and relationships to achieve its objectives

Note 1 to entry: The concept of organization includes, but is not limited to sole-trader, company, corporation, firm, enterprise, authority, partnership, association, charity or institution, or part or combination thereof, whether incorporated or not, public or private.

[SOURCE: ISO 45001:2018, 3.1, modified — The word “association” has been deleted from Note 1 to entry and Note 2 to entry has been removed.]
